

BIOSECURITY KIT PRICE LIST

Tasmania's wild places and areas of agricultural and ecological importance are under threat from the spread of damaging weeds, pests and pathogens. Whether you are a landholder, bushwalker or enjoy recreational activities, cleaning your boots and equipment regularly reduces spread of weeds, pests and pathogens.

By following the simple steps of **Check, Clean, (Disinfect) and Dry** we can help prevent these threats from spreading and protect Tasmania's unique species and places.

NRM South has developed field hygiene kits which are available to purchase at cost to landholders. These kits use F10, non-toxic, biodegradable veterinary disinfectant, recommended due to its effectiveness against a range of pests and pathogens including Phytophthora root rot, Chytrid frog fungus and Didymo.

The type of kit or product you need will depend on the number of people you work with, what work you do, whether you would carry it in your car or backpack or other considerations. Please contact us to discuss your specific requirements.
